DETAILED ACTION

This is response to amendment filed on 10/31/08 in which claims 1-12 are pending. The applicant's amendments have been fully considered therefore this case is in condition for allowance.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: the prior arts of record fail to anticipate or render obvious the following recited features: a synchronization signal demodulating unit demodulating said at least one bit of the synchronization signal by using a result of the channel estimation, wherein said predefined part is defined for each target bit of the synchronization signal to be demodulated and is defined so as to include the target bit; and synchronization detection is made by using the demodulated synchronization signal as recited in claims 1 and 11. A channel estimating unit making channel estimation by using, from the signal having the plurality of slots, the pilot signal with the synchronization signal removed in the slot to be demodulated, and using the pilot signal having the synchronization signal in another slot other than the slot to be demodulated; and a synchronization signal demodulating unit demodulating the signal having the synchronization signal in the slot to be demodulated by using a result of the channel estimation, wherein the synchronization detection is made by using the demodulated synchronization signal as recited in claim 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
